

MOST CHEAPLY FROM THE MANUFACTURER AT AN INTRODUCTORY PRICE!

*The calf house with **1 place of accommodation** ensures a convenient place for one animal with a galvanized runway.*

The hay-rack combined with a foddering device is a accessory requiring small place, easy to remove and mount.

At request it is manufactured in versions that can be mounted outside and inside as well.

A ventilation hole adjustable on the rear panel ensures the air flow.

Overall size of the runway: 1000 mm x 1200 mm.

*The calf house with **5 places of accommodation** is made of one piece. It is formed with an opening suitable for ventilation and/or hay feeding (with a sliding window) on its rear panel.*

The split feeding-trough mounted to the front part of the run is protected against rain by a projecting roof, which allows the fodder to remain dry and clean. The practical form of the feeding-trough ensures the fast filling, feeding of the milk and fodder. On the roof of the house a built-in lifting lug allows the mechanical lifting.

Overall size of the runway: 2200 mm x 2200 mm.

*The calf house with **7 places of accommodation** is made of two symmetrical halves. It can be assembled easily within a short time.*

All the accessories (feeding-trough, hay-rack, bucket) are mounted on the external side of the fence.

A practical gate facilitates the communication of the operating staff and the vet into the pound.

During watering the "neck clamp" fastens the position of the calf by bucket, so they cannot disturb each other until its release.

A ventilation hole adjustable on the rear panel ensures the air flow.

Overall size of the runway: 2800 mm x 2700 mm.

11 151 0	Bucket-supporting stand, galvanized	
11 148 0	Hay-rack, galvanized	1 800 x 400 x 400

The design of the calf houses and the accessories has been made by considering the professional experience of the animal keepers. Therefore the products serve the safe, hygienic animal keeping to the largest extent. The cleanability, durability, easy operation are important criteria, thus the calf houses can be cleaned fast with high-pressure water cleaning equipment.

The mechanical lifting of the calf houses (boxes) with more places of accommodation is allowed by the built-in lifting lug.

Do your shopping at our place, since for the purchase of our products a subsidy may also be applied for through AVOP or EU applications. The calf breeding equipment, nipples, tanks, fishing products manufactured by our Company are included in the Catalogue of Agricultural Machines as devices entitled for subsidy. We work with an extremely wide range of products, individual demands are also satisfied. We produce anything on the basis of a provided drawing, which can be manufactured from polyester with fibreglass reinforcement.

Do not miss the possibility, ask for a proposal!
